

FCWPS Micro Capsule Filters

High Capacity PES Membrane

FCWPS Micro Capsule filters are constructed with proprietary high capacity Polyethersulfone (PES) membranes, available in single or dual layers. Designed to comply with all FDA requirements for the food industry, they are used for reducing particles in critical clarification and filling processes found in beer, wine, water and juice production. Pore sizes range from 0.1 to 1.0 μm and filter sizes scale from laboratory to full production using identical materials to ensure consistent results.

Critical Process' FCWPS Micro Capsule filters are hydrophilic and deliver high flow and throughput. Their low binding characteristics make them highly efficient, which is critical to protecting downstream filters from prefoiling and extending the life of final filters.

Critical Process provides unrivaled delivery times, technical consulting before purchasing, and very competitively priced high-performance products. Our comprehensive testing & analysis and validation services support your team whenever they need it. Your process experts partnering with our filtration experts is how we deliver your company's solution right the first time.

Flow Rates for FCWPS Micro Capsules by Pore Size

Flow rates for Micro Capsule filters are per filter. The test fluid is water at ambient temperature. Flows are tested using a Micro capsule filter with 1/2" Sanitary inlet and outlet ports. Rates will vary based on end configuration of the Micro capsule.
